METEOR

EN Manual for helmets for pedal cyclists and for users of skateboards and roller skates

Before use, carefully read the manual. Keep this manual for future reference.

USE AND PROTECTION

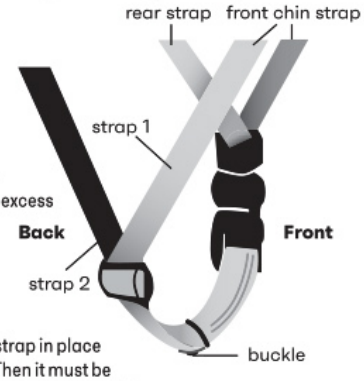
The external construction of the shell allows the helmet to be light while maintaining the quality, durability and integrity. All designed vents along with internal channels ensure adequate ventilation when riding.
The helmet is designed in such a way that the user can customize it and use conveniently: straps should be placed on the ears, buckles positioned away from the lower jaw, straps and buckles are adjustable.
Place the helmet on your head so as to protect the forehead – you should not wear it too far back on your head. Chin strap should be properly fitted and tightened under the chin. The helmet must be put on horizontally, firmly and evenly on the user's head.

- To put the front of the helmet more on the forehead, tighten the rear strap.
- To verify the correct tension, put the helmet on your head and fasten the buckle. When you open your mouth, you should feel the strap pulling your chin. Then try to pull the helmet forward and backward. If the helmet is slipping down, readjust the straps. The helmet cannot move on the head or to be loose. It should also be not possible to remove the helmet without opening the buckle.

BEFORE EVERY USE, BE SURE TO CHECK FIT EQUIPMENT.

The fastening system is based on the QUICK-RELEASE system, that is the system of quick fastening buckles. Adjust the length of the straps so as to provide the user with comfort while ensuring a proper tension to ensure that the helmet will not slip down.

- After putting the helmet on the head fasten buckles. Note which strap is loose and tighten it after removing the helmet.
- To tighten the chin strap, hold the bucklewith one hand and pull the excess strap with the other hand.
- To tighten the rear strap, pull down an excess from the rear side of the strap. Hold the helmet with one hand and with the other hand hold the strap in place where it passes under your chin. Then it must be tensioned so as to compensate for the length of all four straps.



The helmet protects only if it is adjusted. It is recommended that the buyer tried on different sizes and chose the one in which it felt safe and comfortable.

CLEANING AND MAINTENANCE

Do not clean the helmet with solvents or bleaches, as it can cause significant structural breaches. Use only water with a little soap.

STORAGE AND TRANSPORT

The helmet should be stored and transported in such a manner and with such a package that does not expose it to the factors that may alter its protective properties (protect it from crushing, abrasion, battering and other mechanical factors). Do not expose your helmet to temperatures above 65°C.

PROTECTION EFFICIENCY

The helmet is used to absorb an energy of impact and shock. The helmet may not prevent any injury to the head. Even the accidents at low speed can cause serious injury or death. For maximum protection, follow the manual.

ADDITIONAL EQUIPMENT

It is recommended to ride bicycle, skateboards or roller-skates with guards on the knees, elbows and wrists, and with reflectors. We recommend the use of METEOR brand guards.

SHELF LIFE

5 years.

In case of visible material wear (changes in flexibility of the straps and in other properties of materials resulting from its natural aging or operation) and after every (even the smallest and less visible) damage, it must be destroyed and replaced with a new one.

Do not make any modifications or remove the original elements of the helmet. Also, do not adjust the helmet by a wilful completion of the elements. Such actions could significantly compromise the safety of the helmet.

WARNING!
This helmet should not be used by children while climbing or doing other activities when there is a risk of strangulation / hanging if the child gets trapped with the helmet.
